14.	Parent’s perspective towards the cartoon programs and its impact on children during covid19 lockdown Dr. Arvind Kumar Pal Swati Pant	99

Preface...

Research is one way to discover, rediscover and obtain new knowledge, by blending the past in the present and even for the future. Research is useless if it is not delivered, presented, shared in fora, and published. The role of research or research is most important in higher education. It is only by the level of research and its results that the identity of a university is created and students and teachers are attracted towards it. Education institutions which do not pay attention to research and its quality are neither able to do good for the education nor for the good of the society.

It is also a fact that all the major higher education centers in the world like Oxford, Cambridge, Harvard are known because of their high level of research and the quality of the researchers. Amartya Sen (Harvard University), Jagdish Bhagwati (University of Cambridge), Hargovind Khurana (University of Liverpool) not only brought laurels to India because of their research but they also enhanced the reputation of the universities with which they joined. The situation in India is that compared to earlier facilities in the field of research have increased. The level of laboratories in the universities has improved, the facility of internet is easily available to the researchers today, and financially the government also provides sufficient help to the researchers. Facilities for research-focused students in universities have increased. In such a situation, the question arises that when comparative facilities have increased, then why the level of research is not increasing.

A good research demands an educational environment where the level of teachers promotes research and exploration and students are constantly trying to add something new to the subject. But in many big universities of India, this basic trend of investigative research is lacking. However, the overall research situation in India today cannot be said to be patting. For the continuous development of education and to make it socially useful, it is very important that both students and teachers have honest thinking about research and they should move in this direction only with the aim of adding something new to the subject.

Research should not be just for the formality of research, rather it will give momentum to the discipline at the global level. The most important thing for all this is to clear the intentions of policy-makers so that the concept of government and people towards research can also be changed and people associated with research can be seen with respect from the society. The Asian Thinker Research Journal provides a platform to researchers without funding, so that research activities can expand. In this issue, society-focused research is being published prominently.

Lastly, this journal publication of the group is humbly dedicated to all researchers. Thank you for your trust and confidence to us.

(Ramshankar)
