16.	Influence of Public Service Advertising on Youth Dr. Anjali Gupta	113

Preface...

Research: the door to possibilities...

The relationship between knowledge and development is not new. This relationship has become more strong and indispensable today because now knowledge has become the main source of development. The era we are in is called the era of the information revolution. Information is a new form of knowledge. The expansion of information has given rise to new possibilities in the field of research. Today, research work has become necessary in all fields of knowledge, whether it is in the field of humanities, science, or technology. The Internet and mobile phones are developing rapidly today are the result of research. But the research work is being done in the field of social sciences is less than in the field of technology and science. Because of this, we are not able to understand the changes happening in the social field properly because we do not have the standards that can be the basis for understanding these changes. A lot of research in the field of science and technology is not only as an enrichment of the old but also discover something new, it is also original. This happens less in the social and humanities sector.

Today, there is a need that researchers should also research new subjects in the field of social humanities. Today there is a need to research such areas, on which very little work has been done or not done at all. There are many areas including education, entertainment, arts, literature, culture, public behavior, which require research that can help in understanding and developing society. Until we focus on fundamental research in the field of social humanities, we will not be able to understand human behavior and its social effects properly. And if we do not do this, then we will not be able to help in giving the right direction to society. We will not be able to identify ourselves internationally unless we accept the challenge of new subjects, apart from doing research just for the degree or to fulfill academic terms.

The year 2020 was spent in the Corona crisis. During the lockdown, when other activities were closed, many topics were discussed through online seminars i.e. webinars. But in most cases, the attempt to think of new topics was not seen. Many times webinars were held on such topics, which did not show much utility. At that time, listening to the statements of foreign speakers in some webinars of management and other fields, it was found that they had done a lot of study about their subject. In contrast, Indian speakers mostly weave literal nets. The importance of facts and evidence is often overlooked in research and discussion. This is why innovation is not visible in research work. Sometimes the social utility of research is also questionable. Journalism, society, education, employment, literature, human behavior, market; all have social utility. During the Corona Crisis, many types of research came out on these topics, which gave information about the changes happening in social life, the various causes of the current crisis, and what can be their solution.

Today, the world is once again in the grip of a new wave of Corona. Many countries have started lockdown. In India too, the partial lockdown has started in many states. In this new situation, various researches can be helpful for the government in fulfilling the people's

aspirations and formulating the right policies. For this, our researchers will also have to research the point of view of what is there as well as why it is there, what its future results may be and how to make a better social situation in odd situations. Similar research will be able to understand society and man properly. That is why I call to research the door to possibilities through which we can understand life properly and can help make it better.
